

Portable UV Light Germicidal Pen disinfects small areas and surfaces

Research shows that 75% of all pathogens micro – organisms, viruses and bacteria are passed on through touch and transfer. In many instances it is small items and areas that are most susceptible to be overlooked in cleaning processes.

Ultraviolet-light kills the DNA of 99.9% of bacteria and germs after a minimum exposure of 20 seconds. UV lights disinfect by disrupting the molecular bonds that hold together microbial genetic material or proteins.

DISINFECT ALL KINDS OF SURFACES AND SMALL OBJECTS SUCH AS TABLECLOTH, COVERS, ELECTRONIC DEVICES, MASKS, ETC. NO CHEMICALS PRODUCTS, AND LEAVES NO ODOURS.

This small Portable UV Light Germicidal Pen, measures 17.5cm (7") tall x 3.3cm (1.1/2") wide, weighs a mere 100g, and handily fits most pockets or handbags. Carry this pen to disinfect surfaces including tablecloths, covers, masks, electronic devices, desk phones, door handles, taps, coffee cups, and other small areas and objects.

No chemicals are used. No odours are created. Caution: the UV light emitted by this unit is not suitable for use on human skin.

Simple on/off button operation, powered by 2AA batteries (not included), means no electrical connections required; sanitise simply by using anti-bac gel or wipes.
